Discrepancies noted from mapping Invoice and PO:

Sr. No.	Details as per PO	Details as per Invoice	Remarks
1	PO Dated: 29-Dec-2023 total value: ¥2,400,000 (≈ ₹28,225,680 INR)	Invoice Dated: 25-Dec-2023: total billed ₹26,000,000 INR	Invoice predates PO – Indicates possible backdating or procedural lapse.
2	PO in CNY (foreign currency); both items priced accurately in Yuan.	Invoice in INR (local currency); significantly lower than converted PO	Currency mismatch not explained in documentation; no mention of exchange rate or conversion terms.
3	Item: EV-JAQ-50 & EV-JAQ-100 (Qty: 1 each)	Same items listed	No quantity mismatch, but INR price is significantly higher than converted CNY, potential overbilling, or transfer manipulation.
4	PO in CNY with no exchange clause provided	Invoice only in INR with rounded figures	No FX terms or rates disclosed; created space for pricing irregularities.
5	Vendor: XYZ LLC (China)	Vendor: XYZ LLC	Minimal details provided about vendor identity or background, suggest possible shell entity or related party risk.
6	Two distinct machinery types procured together	Same two items	Unusual pairing (earthmoving + plastic machinery) raises concerns about fake bundling or laundering of capital assets
7	No shipping/freight terms or costs breakdown	No shipping costs included in INR total	Lack of shipping details for cross-border capital goods suggests poor documentation, possible underreporting of asset value, or intentional omission.
8	PO implies international shipment of goods	Invoice silent on shipping method or documents.	Absence of delivery/shipping documentation (e.g. BoL, airway bill) hinders audit trail and raises concerns over whether goods were physically delivered.
9	No mention of tax or duty on imported goods.	No tax fields or exemptions declared.	Absence of GST/duty/VAT info on invoice is irregular; could indicate

			underreporting, misclassification, or missing regulatory compliance.
10	PO lists item categories with no model numbers, serials, or asset IDs.	Invoice lists vague categories like “earthmoving equipment” and “plastics processing machinery.”	Lack of itemized detail makes asset validation impossible, affects delivery, valuation, and FAR linkage.
11	PO contract documentation do not include any receipt or shipping instructions.	No delivery receipts, BoL’s or packing slips are attached to invoice or file	No evidence of shipment; introduces risk of fraud (goods may not have been delivered).

Discrepancies noted from mapping FAR and Credit note (CN):

Sr. No.	Details as per FAR	Details as per Credit Note	Remarks
1	Both assets (EV-JAQ-50 & EV-JAQ-100) recorded on 29-Dec-2023	CN dated 03-Jan-2024 for ₹9,000,000 INR (Plastic Machinery)	CN issued after asset was recorded; suggests asset may have been returned or overbilled, but FAR not updated.
2	Both assets listed as in use from 29-Dec-2023	CN covers only one item (EV-JAQ-100)	No matching adjustments made in FAR for EV-JAQ-100; risk of ghost asset or double entry.
3	Asset value for EV-JAQ-100 still listed as active in FAR	CN clear full value (₹9,00,000)	Full value on credit, yet FAR still shows active, potential duplicate claim or internal misstatement.
