

Here is the background information on your task

Your supervisor Michael reviewed the walkthrough narrative and agreed to move on to the next phase of the audit: control testing.

Michael has requested and received the relevant support from the client and has provided you with a workpaper template with instructions. The workpaper is partially completed. You will test the sample items to understand if the control is working, request more information for any exceptions and consider the implications of these exceptions. Your task is to fill out the missing fields associated with the sample testing details and testing conclusion.

Upon completing the testing, you are also asked to communicate the preliminary testing results to your supervisor through email.

Before doing the testing, Michael has provided you with some background knowledge you may need going forward, including the following resources in the next step:

- **"Client Provided Support"**

Here is your task

Your task today is broken down into three parts:

1. Review the documentation provided by your supervisor Michael.
2. Complete the workpaper by filling out the missing fields in the workpaper template, leveraging the client-provided support. **Upload the completed workpaper in the task submission box below as an Excel file.**
3. In the next step you will write up a summary of your work.

Write your email to your supervisor here.

Based on the preliminary testing results from your workpaper, send an email to your supervisor with a summary of your testing result. **Write your email draft in the text submission box below.**

Subject: Preliminary Testing Results - SE-01 User Access Provisioning (Sage Intacct)

Hi Michael,

I've completed the initial operating effectiveness testing for control SE-01 over user access provisioning to Sage Intacct for the period 01/01/2022-06/21/2022.

I tested 5 new user access requests selected from the client-provided population. For each sample, I verified that:

- An access request and management approval existed in the Jira ticketing system.
- The role granted in Sage Intacct aligned with the role requested.
- The approval date was on or before the date access was granted.

Results are as follows:

- Samples 1, 2, and 5: All attributes met. Approvals were documented, roles matched between Jira and Intacct, and approval dates proceeded provisioning. No exceptions noted.
- Sample 3: Exception noted. The role granted in Sage Intacct did not fully align with the role requested/approved in the Jira ticket (failure of Attribute B).
- Sample 4: Exception noted. The date of management approval did not clearly precede the access grant date in Intacct (failure of Attribute C).

Based on the results, my preliminary conclusion is that while the control is appropriately designed, it is not operating effectively for the period tested due to the exceptions in Samples 3 and 4. We may need to (1) obtain additional clarification/support from the client for these two items and/or (2) consider expanding the sample to determine whether these are isolated exceptions or indicative of a broader issue.

Please let me know how you would like to proceed or if you would like any additional detail from the workpaper.

Best regards,

Natascha

Example Answer

Great work! Take a look at the example answer below to see how a professional would have attempted this task. Think about what you did well and how you can improve.

Email:

Hi Michael,

Hope you are well.

I have completed the initial testing for Company X Intacct UAP control and updated the

testing in Aura Platform (PwC workpaper documentation platform). Please feel free to review the document and let me know if you have any questions.

To point out the key findings from the testing: There are 2 users/samples with exception noted. I will reach out to the client for further clarification and obtain potential additional support before confirming them as exceptions. Below are the findings and my suggestions for additional support. Happy to discuss further at your convenience.

1. User “First Name44 Last Name44” was provisioned a role different than requested. Proposed follow up request: Hi Sam, it is noted from the listing provided that the user “First Name44 Last Name44” was provisioned to Intacct with a role different from the IT Ticketing System record. Would you share any additional information you may have to help PwC understand the justification for the different role assignment in Intacct?

2. User “First Name77 Last Name77” was provisioned to the system before an approval was in place.

Proposed follow up request: It is noted that user “First Name77 Last Name77” was provisioned into the system before being approved. Would you mind providing more background on this user? Is there any reason that the user needs access in Intacct in an expedited manner?

Regards,
