Topic: Company X - Sage Intacct - User Access Provisioning

Attendee:

- Michael, PwC DAT Senior Associate
- [insert your name], PwC DAT Associate
- Sam, Director of Sage Intacct system (Company X)

Transcript:

Michael: Thanks everyone for joining today. I am Mike, the senior associate on our team. Along with me is [insert name], he/she is the associate from our team. We are excited to work with you to assist the SOX project this year.

To get started, we are here to discuss the user access provisioning process over the in-scope system Sage Intacct. We have examined the flowchart provided and obtained an initial understanding of your process. We appreciate the proactive assistance you have been providing. As of this meeting, we would like to have Sam go through the end-to-end process of how user access is provisioned/modified to Sage Intacct on a high level, and then we will follow up on some clarification questions if needed. If there are no further questions, we can get it started.

Sam: Sure! As you can see in the flow chart, I first receive the notification from our IT ticketing system, saying there is a user who needs to be provisioned to Intacct. I then validate that there is an approval provided by the supervisor and ensure the access is appropriate based on the job duties. If there are any suggestions from me, I will reach out to the ticket initiator for discussion. Once the user and the role are both finalized, I will then provision the user to Intacct by manually adding their email and name to the system. The user will receive an email from the system to set up the account initially. I then put the details into the ticket and close it out.

Michael: It sounds very straightforward. I have a few follow-up questions to ask if you don't mind. How is the user modification being handled for Sage Intacct?

Sam: It's a similar process, other than the fact that the user can initiate the ticket. However, I will validate there is proper approval provided before making the change in my system.

Michael: Great! Who is the one reaching out for the missing approval in this case?

Sam: It would be me.

Michael: Other than the approval, are there any other differences between user provisioning and user modification?

Sam: Nothing else.

Michael: One last question, what is the ticketing system your organization is using?

Sam: I believe it is Jira.

Michael: Thank you so much for the time today. We will circle back internally regarding the information today. The next step will be evidence gathering and control testing. We will reach back in a couple of days with detailed requests.
